7 AI Workflows That Can Save Service Businesses 5+ Hours Per Week

No fluff, no jargon — seven workflows you can actually run this week, built for businesses too busy to become AI experts.

READY-TO-RUN WORKFLOWS

5+
HOURS BACK PER WEEK

0
NEW TOOLS TO LEARN

BEFORE YOU START

Pick one problem. Fix it this week.

Every workflow here solves one specific problem I hear from service businesses constantly: missed calls, slow follow-up, proposals that pile up, and admin that eats the hours you meant to spend billable. None of it requires a technical background — if you can send a text and record a voice memo, you can run every one of these.

> Start here: pick the one problem that costs you the most time and try it this week before moving to the next.

WHAT'S INSIDE

01	The Missed-Call Text-Back	3–5 HRS/WK
02	Voice Memo to Client Follow-Up Email	2 HRS/WK
03	Voice Memo to Proposal Draft	3–4 HRS/WK
04	The Estimate Follow-Up Sequence	2 HRS/WK
05	Sales Call to CRM-Ready Summary	2–3 HRS/WK
06	Auto-Drafted Review Requests	1–2 HRS/WK
07	The Weekly “Where Did the Week Go” Audit	BONUS

WORKFLOW 01 OF 07

01 The Missed-Call Text-Back

~3–5 HRS/WEEK SAVED

THE PROBLEM

Most service businesses miss 20–30% of inbound calls during job hours — and a missed call is a lead who's already dialing your competitor next.

THE WORKFLOW

Most phone systems already transcribe voicemails for free. Paste that transcript into a saved AI prompt that drafts a short, personalized text-back in your voice — not a generic “sorry we missed you.” Review it, send it, done in under two minutes.

> TRY IT THIS WEEK — Save one prompt template. Run your next three missed-call voicemails through it and compare the draft to what you'd have written cold.

WORKFLOW 02 OF 07

02 Voice Memo to Client Follow-Up Email

~2 HRS/WEEK SAVED

THE PROBLEM

You leave a great conversation with a clear picture in your head — and by the time you're at a laptop that evening, half the details are gone.

THE WORKFLOW

Record a 60–90 second voice memo right after the call summarizing what was discussed and the next step. Drop the transcript into AI with your standard follow-up structure, and send a personalized email within the hour instead of two days later.

> TRY IT THIS WEEK — After your next client call, record the memo before you do anything else — even before you get back in the truck.

WORKFLOW 03 OF 07

03 Voice Memo to Proposal Draft

~3–4 HRS/WEEK SAVED

THE PROBLEM

Writing a proposal from scratch eats an evening, so proposals pile up and go out late — or not at all.

THE WORKFLOW

Right after the walkthrough, talk through scope, price range, and timeline into a voice memo. Feed the transcript plus your standard proposal format to AI and get a full first draft back in minutes. You adjust numbers and tone, not structure.

> TRY IT THIS WEEK — Build the proposal template once, then reuse it — the time savings compound every time after the first.

WORKFLOW 04 OF 07

04 The Estimate Follow-Up Sequence

~2 HRS/WEEK + MORE CLOSED JOBS

THE PROBLEM

You send an estimate, get busy, and forget to follow up — and most jobs are won on the follow-up, not the first quote.

THE WORKFLOW

Build a simple three-touch sequence (day 2, day 5, day 10) with AI-drafted messages that sound like you, tracked in nothing fancier than a spreadsheet. The point isn't sophistication — it's that nothing falls through.

> TRY IT THIS WEEK — Write the three touches once. Apply them to every open estimate sitting untouched right now.

WORKFLOW 05 OF 07

05 Sales Call to CRM-Ready Summary

~2–3 HRS/WEEK SAVED

THE PROBLEM

Notes from a client call either don't get written down, or take fifteen minutes to do properly — so they usually just don't happen.

THE WORKFLOW

Record the call (with permission), then run the transcript through a saved prompt that pulls out the pain points raised, any objections, the next action, and a one-line CRM note. Paste it in. Under a minute, every time.

> TRY IT THIS WEEK — Use it on your next three calls and see how much more consistent your CRM notes get.

WORKFLOW 06 OF 07

06 Auto-Drafted Review Requests

~1–2 HRS/WEEK + MORE REVIEWS

THE PROBLEM

Asking for a review in person feels awkward, and a generic auto-text gets ignored or feels spammy.

THE WORKFLOW

The moment a job's marked complete, have AI draft a short, specific message that references the actual job — not a template. Send it same-day, while the client's still happy about the result.

> TRY IT THIS WEEK — Compare the response rate on one specific, job-referencing message against your usual generic ask.

07

WORKFLOW 07 OF 07

The Weekly “Where Did the Week Go” Audit

TELLS YOU WHAT TO AUTOMATE NEXT

THE PROBLEM

You know something's eating your week. You can't point to exactly what.

THE WORKFLOW

Once a week, spend five minutes voice-memoing a rough list of everything you did. Have AI sort it into billable work, admin, and repetitive tasks — and flag whatever shows up every single week. That's workflow number eight, waiting to be built.

> TRY IT THIS WEEK — Do this once before you build anything else on this list — it tells you which of the other six actually matters most for your business.

Want these built into your business instead of DIY?

Reading the list is the easy part. Getting it actually running — without it becoming one more thing on your plate — is where most of this stalls out. That's the part I do for a living.

LIMITED BETA · 3 OF 3 SPOTS OPEN RIGHT NOW

A working AI automation, live in your business within 14 days — free.

In exchange, just an honest testimonial if it delivers. No pitch, no obligation to continue after.

Not ready for that? Start with a free 30-minute AI Opportunity Audit — we'll find the 1–3 automations that would save your business the most time, and you'll walk away with a clear next step either way.
